

# REALITY

TRAINING

A business' greatest competitive advantage is a team in sync. But have you tried getting your team to rally around organizational goals, act consistent with corporate interests, embrace best practices, or change hard held beliefs?

Through the fusion of technology, science of adult learning, videography and computer based learning; RealityV™ has emerged enabling the most effective team training. Beyond classroom training, beyond computer based learning, beyond serious gaming – RealityV™ achieves unmatched levels of knowledge retention, critical decision making, and performance-under-stress assuring predictable performance under the most demanding situations.

RealityV™ is a personalized interactive video program that immerses each trainee into a personal or team playing scenario. Learning takes place through a series of learning – doing – learning – doing exercises. Like a movie, all scenes are created with real actors creating a highly immersive, realistic and emotive learning environment. But unlike a movie, the trainee interacts with the action, thereby affecting scenario outcomes and influentially witnessing the consequences of their decisions.

Imagine your corporate knowledge, best-practices, new initiatives and objectives weaved into a poignant story with embedded dynamic game play imparting key learning points. Company specific topics like ethics, leadership, sales, negotiation, and culture are ideally handled by RealityV™.

InVisM is at the forefront of this new training methodology. It has assembled leading experts in adult teaching, serious gaming, simulations, business and technology to customize RealityV™ training to your specific needs. It then makes training securely available anytime and anywhere - minimizing travel and interrupted work.

Training is useless unless it lets you win - RealityV™ is guaranteed to profoundly transform your organization and positively enhance your competitive advantage.

Teams in sync are an unstoppable competitive advantage

Internalizing objectives and tactics requires engagement and practice

RealityV™ Training proven effective by the US Army

Development time in weeks for timely deployment

RealityV™ training for assuring appropriate decision making under adverse conditions
